

The Electronic Banner Sign

The Electronic Banner Sign **BS-10 series** has been designed using advance modular technology in the purpose to support flexibility in meeting the increasing market demand for unrestricted length. With the latest addition of the optional flexible PCB version, the sign can be easily fitted to any curvature or irregular shape surface wherever required in the site environment.

The basic display unit is offered in 16 by 32 pixels with display area 160mm by 320mm. A number of such units will be chained up to form a long Banner with length up to thousand meters. There is a built-in controller with standard RS485 or RS232 com port equipped for external PC communication. The LED elements in use are of 5mm diameter high quality superbright wide view angle type. Amber or red colour is in our standard offer, other colours such as green, blue and white etc are available upon request. In most applications, scrolling text message or logo pattern shown on the Banner can be uploaded by the local control PC whenever the information needs updating. Information on board will be stored and displayed in scrolling mode in a round ribbon manner. In some applications when real time information is expected, the Banner can be implemented to act like a streaming ticker device which is ideal for News and Stock Ticker applications.

There are 3 scrolling speeds, auto/manual brightness control feature available to optimize the visual display effect no matter it is installed inside or outside the premises. If you want to convey your message to the public efficiently and promptly, the use of this Electronic Banner Sign becomes one of the most cost effective solutions to give your audience the greatest visual impact in your presentation.
